

# How to protect the Environment

By: Hunor Papp

# The most important things

- The three most important thing to protect the Environment are:  
Recycle  
Reuse  
Reduce.

# Recycling

- There are 5 recycling types:
  - Metal
  - Plastic
  - Paper
  - Glass
  - Organic

We use these products to protect the seas, forests, plants or the Humans.

# Reduce

- In the definition of reduce we reduce the pollution, the number of the plastic waste in the seas to protect our Earth. If we don't reduce some animals can die.

# Reuse

- In the meaning of reusing we reuse materials that we can't recycle. In example we reuse plastic bags or in the better option use paper bags.

# Air pollution

- How can we reduce air pollution?
  - We can use public transport,
  - Electric cars,
  - Don't use too many times fireplace.If we do these, the air pollution will reduce.

# Water pollution

- The chemicals we use goes into water which causes this. The sea or lake animals goes to danger our water supply decreases. To reduce we have to reduce chemicals.

# Summary

- We have to use these three definition to save the Planet, animals and humans. In the end we can protect the Earth.

# Thanks for watching!

- Don't forget to protect the environment!
